

Rio Grande Floodway, San Acacia to Bosque del Apache, New Mexico

(Future construction)

The project consists of the reconstruction of 43.5 miles of existing west side spoil bank levee located along the Rio Grande, extending from the upper end of the Rio Grande low-flow conveyance channel at the San Acacia diversion works to the San Marcial railroad bridge. The rehabilitation of the railroad bridge to restore its capacity to pass flood discharges on the Rio Grande is also a part of the project. The primary benefit is the protection of the Rio Grande Low-flow Conveyance Channel from Rio Grande flooding.

At present, the project is being reviewed to reaffirm its costs and benefits.

The project is funded under the Construction, General appropriation..
